

Homework #3

Start Assignment

- Due Monday by 11:59pm
- Points 200
- Submitting a file upload

Do the following exercises in *Parameter Estimation and Inverse Problems* (Aster et al textbook). Do not procrastinate on getting started well before the due date! This is a long homework assignment (and is worth twice HW#2 for this reason). Data files and relevant Matlab codes mentioned in the exercises are found in Files-->Homework3. It should be straightforward to use/convert for Python.

1. Exercise 1a-i in Chapter 2 (seismic profile experiment)
2. Exercise 2 in Chapter 3 (checkerboard test)
3. Exercise 4.2a-f in Chapter 3 (sandstone quarry; complete dataset only)
4. Exercise 5a-c in Chapter 3 (set up and solve system of equations from given equation/data)
