

Least-Squares Model Predictions

Least-Squares Model-Data Residuals

Error Ellipsoid for Least-Squares seismic profiling model

Monte Carlo Seismic Profiling Simulation: 1000 Iterations

Least-Squares vs. IRLS Model Predictions

Least-Squares Model-Data Residuals

Model Null Space: Trivial solution $\mathbb{G} \cdot \mathbf{m}_{\text{null}} = \mathbf{0}$

Model Null Space: Reshaped Visualization (256 --> 16 x 16)

i=0 Model Null Space vector
Sum = -1.1102230246251565e-16

i=1 Model Null Space vector
Sum = 0.0

i=2 Model Null Space vector
Sum = -6.140921104957897e-16

Resolution Matrix

Resolution Matrix (logscale)

Model Space: Truncated SVD solution $\mathcal{G} \cdot \mathbf{m}_+ = \mathbf{d}$

Model Space: Truncated SVD Resolution (diagonal)

Truncated SVD solution $\mathcal{G} \cdot (\mathbf{m}_\dagger + \mathbf{m}_{\text{null}}) = \mathbf{d}$

Picard Ratios

Recovered model $m(x)$
